The American International University

Transformation
is Taking Place

Hoppers to be
Replicated &
Replaced

ARP Ltd is a specialist manufacturer of architectural aluminium roofline products. The sectional division involves rainwater and eaves products manufactured from aluminium with an extensive range of components to enable easy assembly and installation.

The American University have recently placed an order to transform the historical premises from its derelict condition. Their remit was to replicate the existing guttering as closely as possible. ARP went straight to work and came up with the 3mm ogee guttering in a replicated railway pattern and 76mm cast collared aluminium pipe. The replica hoppers are fabricated from 3mm aluminium sheet.

The first part of the project is in the process of being completed, with the site being finished in the next 18 months. However, it doesn't stop there. Plans are under way for 10 new apartment blocks to be built over the next 4 - 5 years within the University grounds. An opportunity to introduce some of our more modern product range.

SECTOR: Redevelopment & New Build

LOCATION: The American International University, Hertfordshire

CLIENT: Comer Homes

INSTALLER: Leakproof Seamless Gutters

PRODUCT: 3mm Railway Pattern Ogee Guttering with 76mm Cast Aluminium Pipes & Fabricated Hoppers
